Join the Winning Team...
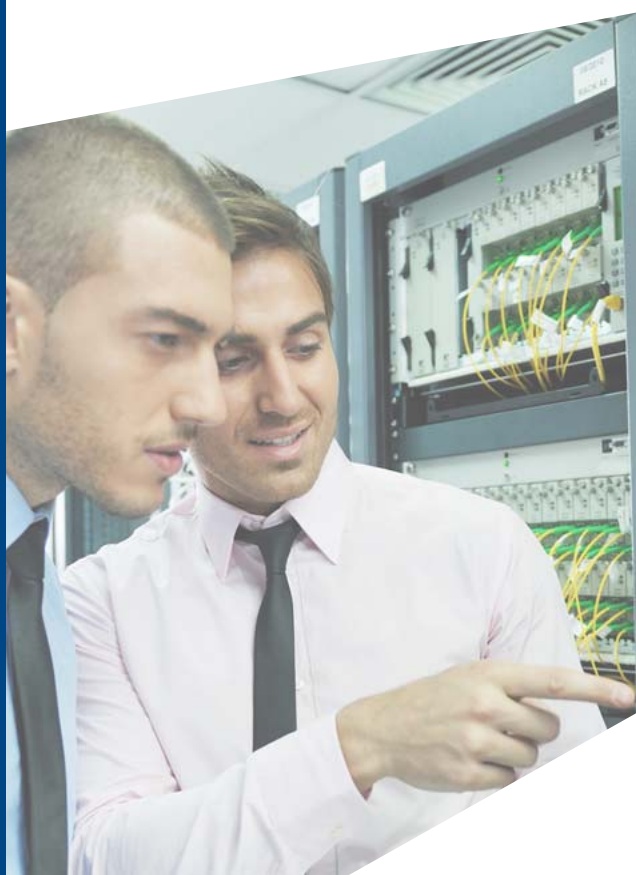

An unique opportunity for a practical hands-on

Site Engineer

The role of a Site Engineer at Visual Management Systems Ltd. requires a variety of mental and physical skills as you will often be involved in the entire process of installing a complex security system. The planning and design of the system, the installation and cabling, the deployment of hardware, the commissioning, software configuration and finally, customer training.

As such an ideal candidate should be competent with IT/networking and be willing to get their hands dirty from time to time. But, more important than the technical skills are problem solving and priority management. On a day to day basis you will need to solve a wide variety of problems from infrastructure to IT, from networking to general system fault-finding. You will be faced with several of these tasks daily, so the ability to prioritise and tackle them in a logical manner is extremely important.

As a Site Engineer you will interact with customers, serve as the "public face" of the company and be the customer's first point of contact if they have questions. Therefore, you will be expected to be professional, courteous and above all helpful at all times, explaining complicated concepts in simple terms or if helpful via demonstrations.

A role as a Visual Management Systems Ltd. Site Engineer is ideal for those who are in possession of or wish to develop a wide variety of IT and practical skills and seek to apply them by providing high quality customer facing service within the security and safety sector.

The Skills

- Use of hand tools
- Infrastructure deployment
- Basic electrical wiring and fault-finding
- PC hardware fault-finding

- Windows system administration
- IP network design and implementation
- The configuration of bespoke security systems
