

Integrated IP CCTV Platform for Museums and Galleries

These are challenging times for local government, museum authorities and security managers.

Designed with the needs of museums authorities and security managers in mind, Titan Vision is a state of the art IP CCTV video management software application.

“TITAN VISION has been an important partner to Glasgow Museums & Galleries for over eight years. They have kept our security systems up to date with the latest technology: including the original move from analogue to digital, hard disk recording, high quality IP CCTV, video analytics, people-counting and now the latest wireless cameras and recorders.” - Tom Gallacher, Security Manager, Glasgow Museums & Galleries

- Assuring security for inter-museum loans
- Providing people-counting information in support of funding applications
- Securing commercial insurance or government indemnity more easily
- Achieving substantial annual cashable savings
- Controlling costs of invigilation, people-counting and after-hours security
- Securing very valuable exhibits with video analytics and alarm cause-and-effect
- Integrating with and upgrading pre-existing systems, including facial recognition, access control and fire alarm

Interoperability

Quality

Usability

Completeness

TITAN VISION has supplied Glasgow Museums with a complete, state of the art, fully integrated IP CCTV solution for the past eight years:

- Generating cost savings of more than £500k per annum
- Protecting invaluable exhibits such as the Pembroke Armour
- Scaling and evolving economically and effectively with the needs of the museums

Our experience of working with Glasgow (the largest local authority museums service in the UK) means that we understand the particular needs of museums and we are ready to help you:

- Design an IP CCTV installation which is appropriate and cost effective
- Upgrade your existing systems with new technology
- Generate substantial economic savings
- Provide robust assurance that your collections are fully protected

Glasgow Museums houses a collection of 1.2 million objects of national and international significance valued at over £400 million curated in 13 different buildings.

Glasgow Museums saves £150k per annum on the costs of invigilation and security at one site alone. Across the estate, the savings are greater than £500k per annum.

Titan Vision has enabled Glasgow City Council to centralise and integrate its new and existing CCTV systems with 200+ cameras as well as to fully integrate fire, security and access control systems covering 17 sites and all related detection and control equipment.
